The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Niki et al (4,181,749) for reasons of record used in rejecting claims 1-5 in the last office action.

Applicant argues that Antarctic krill is required in the present process. This argument has been considered but is not persuasive. Krill is a named fish choice in Niki at column 2, line 1. The fact that there are no examples showing krill is not seen to overcome the rejection. Applicant argues that Niki does not show separating krill into a liquid fraction and a dense fraction. This is disagreed with because this feature is shown in the first paragraph of Example 1. Applicant argues that water is added to the fish so that it is not biological water. This argument has been considered but is not persuasive. Firstly, if one wanted to extract water-soluble ingredients from fish it would be obvious to included added water to enhance the extent of extraction of these ingredients. Second, the claims as written do not exclude the use of added water to extract "biological water" from the fish.

Applicant argues that his process does not include mincing the fish. But the claims do not exclude mincing. Mincing would have been an obvious way to enhance the efficiency of extraction in the fish. Applicants arguments concerning the applicability of the reference to Antarctic krill are not persuasive, given the naming of krill as a fish source in Niki, as discussed above. Applicant argues that additives are employed in his invention. But Niki employs salt and sugar as an additive. Applicant argues that the fractions used in Niki are different from the fractions used in the claimed invention. This argument has been considered but is not persuasive.

The rejection of the claims under 35 USC 112 has been dropped in response to applicants arguments relating to the claims.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory

period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
